

EIIA-Cre mouse

Gene/Protein Targets:	Cre recombinase under the EIIA promoter.
Relevance:	The adenovirus Ella promoter directs expression of Cre recombinase in preimplantation mouse embryos. This transgene expresses Cre recombinase in nearly in all tissues. (Whole-body EIIA knockout).
Model Type:	Knockout Models
Genetic Background:	C57BL/6
Zygosity:	Homozygous
Disease Keywords:	Osteoporosis

Proc Natl Acad Sci U S A. 1996 Jun 11; 93(12):5860-5.
Notes:	This transgenic mouse line carrying the cre transgene under the control of the adenovirus EIIA promoter that targets expression of the Cre recombinase to the early mouse embryo.
